Senior Software Engineer - SFDR Team

Dear Hiring Team,

I am writing to express my interest in the **Senior Software Engineer – SFDR Team** position at **Clarity AI**. I bring more than **15 years of experience** in backend engineering, with the past few years focused on large-scale systems, performance improvements, and distributed architectures. I believe this combination of long-term backend expertise and recent experience in high-scale environments makes me a strong fit for this role. I am highly motivated by the opportunity to contribute to a product that combines technical excellence with meaningful societal impact.

Throughout my career, I have worked across a wide range of contexts: large multinational companies, highly regulated environments, product-based organizations, and early-stage startups. This has allowed me to develop a strong ability to adapt, collaborate effectively with diverse teams, and take ownership of complex systems throughout their entire lifecycle.

Currently, at **The Workshop**, I work on a large-scale, multi-tenant backend platform serving over **500,000 daily active users** and processing close to **1,000 operations per second**. My work focuses on designing and maintaining resilient, scalable services using **Java 17+**, **Spring Boot**, **Kafka**, **RabbitMQ**, **Docker**, and **Kubernetes**. I actively participate in architectural decisions, production monitoring, incident resolution, and performance optimization, fully embracing a *"you build it, you run it"* mindset.

Some examples of my recent impact include:

- Improving marketing campaigns execution times by **90–95%** through logic refactoring and flow optimization.
- Contributing to a company-wide Kubernetes cluster upgrade, coordinating with multiple internal and external teams to ensure a smooth production rollout.
- Designing automation tools that significantly reduced manual operational effort for on-call and incident management.
- Participating in technology migrations (e.g., Cassandra to Elasticsearch) to improve system maintainability and performance.

I place a strong emphasis on **clean code, testing, and observability**. I regularly work with unit, integration, contract, and end-to-end tests, and I have hands-on experience with monitoring and alerting using tools such as **Prometheus**, **Grafana**, and **Alertmanager**. I strongly believe that well-tested and observable systems are key to long-term scalability and reliability.

Beyond pure engineering, I have a **product-oriented mindset**. I enjoy understanding the business context behind technical decisions and aim to deliver solutions that provide real, measurable value. My background in **Data Science and Big Data**, including a master's degree in the field, also allows me to collaborate effectively with data-focused teams and understand data-intensive systems end to end.

Clarity AI's mission to bring transparency and sustainability to financial markets resonates strongly with me. I am particularly drawn to your fact-based culture, focus on impact, and commitment to building robust, scalable technology to support critical decision-making.

I would welcome the opportunity to contribute my experience, technical leadership, and problem-solving mindset to the SFDR team at Clarity AI. Thank you very much for your time and consideration.

Kind regards,

Diego Castro Viadero
